1. **The state’s largest system of higher education**
   For most Washingtonians, the road to higher education begins at a community or technical college. Our 34 community and technical colleges enroll nearly six out of every 10 full-time students in Washington public colleges and universities.¹

2. **A vital niche**
   With their mix of job training programs, degrees, and classes that transfer to four-year universities, community and technical colleges fill an important niche in higher education. Two-year colleges serve about 386,000 Washingtonians each year.²

3. **A less expensive option**
   Washington’s two-year colleges are a considerably less expensive option at $3,852 per year for a full-time student. That’s about one-third the tuition at research universities and nearly half the tuition at our comprehensive state colleges and universities.

4. **A pathway to bachelor’s degrees**
   Forty percent of public baccalaureate graduates in Washington start at a community or technical college. Students who transfer from two-year colleges to four-year universities do just as well as those who started as freshmen, with similar GPAs and credits earned. Transfer students make up 47 percent of business majors, 46 percent of health field majors, and 35 percent of majors in science, technology, engineering and math fields.³

5. **In-demand job training**
   Community and technical colleges provide the job training students want and employers need. These “high demand” programs -- in fields like dental hygiene, cybersecurity and advanced manufacturing -- move people into good jobs that are available right now and help us compete in the global economy.

6. **Value-added**
   Community and technical colleges and their former students add $11 billion to Washington’s economy each year.⁴

7. **A diverse student body**
   The median age of Washington community and technical college students is 26 years old. Forty-four percent work, 28 percent are parents, and 43 percent are students of color.⁵

8. **A first step**
   Community and technical colleges provide adult basic education, high school completion programs, and precollege (or “remedial”) education, providing that first, most important stepping stone to job training, certificates, and degrees.
